Daniel U. Agbake Matthew

FULL-STACK WEB3 ENGINEER · BLOCKCHAIN SYSTEMS ARCHITECT

Awka, Nigeria | 99craftson@gmail.com | +234 903 733 4349 | @0xbigdream | github.com/bigdreamsweb3

PROFESSIONAL SUMMARY

Full-stack Web3 engineer and blockchain systems architect with hands-on experience building production-oriented applications across React/Next.js, TypeScript, Node.js, backend APIs, databases, wallet integrations, and blockchain infrastructure. Founder of TrustLink Labs and architect of the Transfer Settlement Network (TSN), a Solana-based settlement protocol for cross-chain stablecoin payments. CTO at FRAMP, building crypto on/off-ramp, payments, and stablecoin savings infrastructure. Experienced in connecting frontend applications, backend services, wallets, RPC/blockchain infrastructure, and transaction workflows into complete end-to-end products. DSCVR Canvas Buildathon winner ($3,500) with multiple shipped open-source Web3 projects.

WORK EXPERIENCE

Founder & Protocol Architect

2025 – Present

TrustLink Labs · github.com/Trustlink-Labs · trustlink-pay.vercel.app

- Architected and implemented the Transfer Settlement Network (TSN), a Solana-based settlement infrastructure for identity-first, intent-based cross-chain stablecoin payments.
- Built end-to-end blockchain workflows spanning TypeScript/Next.js applications, backend services, Solana programs, transaction authorization, settlement execution, and off-chain state management.
- Developed the live Solana settlement layer using Rust/Anchor, including TIN identity infrastructure, GPRU routing, epoch-based treasury accounting, confidential settlement interfaces, and cranker-based transaction execution.
- Designed transaction lifecycle and security mechanisms covering authorization, replay protection, non-custodial fund routing, verification, settlement, and recipient payout.
- Architected a cross-chain settlement domain connecting Solana intents with Attestcoin/Creditcoin verification and settlement infrastructure.
- Built and maintained technical specifications, architecture documentation, developer workflows, and open-source repositories for the protocol.
- Submitted TSN to the BUIDL CTC 2026 Fall hackathon in the DeFi track.

Chief Technical Officer (CTO) / Full-Stack Developer

May 2025 – Present

FRAMP

- Architected and developed full-stack crypto financial applications using Next.js, React, TypeScript, Node.js, Supabase, and Firebase.
- Built backend APIs and data services supporting crypto on-ramping/off-ramping, stablecoin savings, payments, wallet management, and transaction workflows.

- Integrated crypto/payment gateways and wallet infrastructure into user-facing applications and backend services.
- Implemented authentication and KYC/AML-oriented user flows for cross-border financial products.
- Designed frontend and backend components for production deployment, operational reliability, and maintainability.
- Led development workflows including code reviews, CI/CD, debugging, performance optimization, and technical planning.

SELECTED PROJECTS

Transfer Settlement Network (TSN)

`Rust/Anchor · Solana · TypeScript · Creditcoin/Attestcoin`

Identity-first, intent-based settlement protocol. Live Solana layer with TIN, GPRU, TCAP, and ConfidentialSettlement. Cross-chain Creditcoin domain using Attestcoin Protocol in active build.

`github.com/Trustlink-Labs`

ChainPay-Africa

`TypeScript · Blockchain`

Blockchain-based bill payment for electricity, internet, and utilities across Africa. Fast, low-cost, borderless transactions.

`github.com/bigdreamsweb3/ChainPay-Africa`

DeFiSeek

`TypeScript · Next.js · OpenAI · Web3`

AI-powered dApp for real-time blockchain analysis, scam/risky asset detection, and misinformation alerts. Integrated Civic Auth for secure Web3 login.

`github.com/bigdreamsweb3/defiseek`

Aurion Swap Protocol

`TypeScript · Solana`

Decentralised token swapping on Solana with gas-efficient DeFi swaps and wallet integration.

`github.com/bigdreamsweb3/Aurion-Swap-Protocol`

WhatsApp-My-Kitchen

`TypeScript · Next.js`

Full-stack WhatsApp-based food ordering system for home cooks and local food businesses. Cart, checkout, and payment proof.

`github.com/bigdreamsweb3/WhatsApp-My-Kitchen`

MemeCoinTracker

`JavaScript · LitElement · Vite.js · Web3`

Real-time meme coin tracker with market data feeds and search. DSCVR Canvas Buildathon winner — $3,500.

`github.com/bigdreamsweb3/MemeCoinTracker`

AWARDS

DSCVR Canvas Buildathon Winner

DSCVR / DoraHacks · November 2024

- Built MemeCoinTracker: real-time meme coin tracking app (LitElement, Vite.js, Web3) with market data, search, and responsive UI. Recognised for innovative design and real-time functionality.
- Repo: github.com/bigdreamsweb3/MemeCoinTracker
- Announcement: youtu.be/aTrYfaXhtvc

TECHNICAL SKILLS

Frontend	React, Next.js, TypeScript, JavaScript, LitElement, Vite.js, responsive Web3 interfaces

Backend	Node.js, REST APIs, Supabase, Firebase, PostgreSQL, authentication, backend services
Blockchain	Solana, Rust, Anchor, wallet integration, RPC infrastructure, transaction workflows, smart-contract integration, on-chain/off-chain systems
Web3 / DeFi	Wallets, token transfers, DeFi applications, stablecoins, payment infrastructure, cross-chain settlement, intent-based transaction architecture
EVM	Solidity, EVM fundamentals, smart-contract integration, ERC token standards
Infrastructure	Git, CI/CD, deployment, testing, performance optimization, distributed transaction workflows
Security / Architecture	Non-custodial systems, authorization flows, replay protection, confidential state, commitment schemes, privacy-preserving architecture
Additional	Attestcoin Protocol, AI/Web3 applications, open-source package development

EDUCATION

Industrial Production Engineering (Certificate of Higher Education)

2016 – 2021

Nnamdi Azikiwe University — Awka, Nigeria

- Self-directed transition to full-stack, blockchain, and AI development with hands-on fintech/Web3 experience.
- GitHub: github.com/bigdreamsweb3
